Business Case for Reefer consolidations for export

Created by: Catherine Andreka

Date; 22 Jan 2026

Exports of temperature sensitive products via consolidation in reefers= Shared Reefer Services

INDEX

- Summary of the service offering
- Target commodities
- Target customers
- Target countries
- The transport and collection process
- The Cold store onboarding and process
- NRCS process
- PPECB process
- Documentation process
- Shipping lines and booking of the container
- Insurance of cargo
- Tracking and communication
- Customs and delivery to cold store at destination
- BACK END view and dashboards

Summary:

Seairo Cargo Solutions offers a SRS (Shared reefer service) reefer service to various destinations and build up a reefer consolidation service for frozen seafood products. This will roll out to various other products such as meat, poultry, dairy and fruit as well.

As well as offer the service on an import leg, where by South African importers can book SRS services from Europe as well.

Cargo would be collected via refrigerated truck in the respective provinces and delivered to a ZA approved cold store that is accredited to handle the cargo for the destination country. Seairo Cargo would manage and handle the transport and cold store relationship.

The NRCS, PPECB inspections would also be managed and booked by Savino Del Bene Operational team. Savino would ideally align with MSC, Hapag Lloyd, ZIM line or ONE, or whichever shipping line offers the shortest sailing with the most efficient communication and services, which also needs to align with the best landside price offering at destination.

Seairo Cargo Solutions would manage the collection from the customers premises, the cold store booking, the authority bookings and documentation as well as the South African landsides, Sea freight bookings and the delivery and destination charges, excluding vat and duty where necessary, this would be exported on DAP or DDP term from South Africa to destination.

DAP or DPP allows for complete control, customer confidentiality and to mitigate any delays on clearance which could ultimately hold up the entire container resulting in additional charges for everyone sharing.

The cargo would be move on a master bill of lading from Savino South Africa to Savino at destination with multiple house bills per exporter.

On delivery to destination country, the cargo would need to go to an approved cold store for unpack, the destination charges, as well as release, would be for the shipper/exporters account, but managed by Savino in the respective country of destination.

DDP – Tax and duty would be billed to the South African exporter

DAP – Tax and duty would be billed to the consignee and all other charges to South African exporter.

Some of the current challenge

- Consignees are buying less in other countries
- Building up of stock in a cold store over a month or two to reach the full containers capacity is costly
- Lower supply, meaning less volumes
- Airfreight is significantly more expensive
- Limited volumes on 20ft reefers, also making it more expensive than a 40ft Reefer
- Wasted space in a 40ft to achieve the lower freight rate.
- Smaller exporters don't always have enough volume to fill a 40ft containers
- This is resulting in a lost sale or new country opportunity as its taking to long for the exporter

Selling points to customers

- Booking is made easy via the SRS portal
- Visibility of the booking and container tracking is made visible to the customer or paying party
- Cost saving for the exporter versus air freight
- Sharing a 40ft container also provides a cost saving versus booking an entire 20ft.
- Saving on cold storage as there is a more frequent sailing and smaller loads can move more frequently.
- If shared then there is no worry of wasted space, lashing and cushioning etc
- Means you can send customers what they need, when they need it with the option of a shared reefer option.
- More regular small orders
- Sellers can now sell per pallet
- Save cost on cold storage, save on freight rates
- Keeping their customers happy
- Opens up opportunity for small to medium fish exporters to new countries

Target commodities and customers - Pork is also exported to the islands which is an area we could also consider. It will be rolled out in the seafood industry first and then introduced into other categories

Fish	Countries	Products
Pereira Ocean Products	UK, Australia	Hake
BCP		
Sea Harvest		
Viking Fishing		
Hendy Bros	Israel, Portugal, Italy	Hake, Squid, various others
Blue Seas	Dubai, UK	
Scansa Trade	Dubai and UK	Trout, and Finished goods
GSA Traders	Portugal and Australia	Hake, Seabass
Eyethu Fishing	China, Italy, Portugal, UK, Ireland, Israel,	Hake, Seabass, Squid
Pesca Nova		
Pesca Luna	Europe	
Premier fishing		
Sovereign Fish Export	Israel, France	Finished crumbed products
ICV Tuna		
Ocean Basket		
In2food Seafood division		

Target Countries

Middle East – Dubai, Israel	For Israel consignees need to agree and apply for permit for nominated cold store, 40ft reefers DAP term Delivery to customers facility Israel require Kosher certificate Middle East require halaal if it's been further processed
Europe – Portugal, France, Italy, Spain, Ireland	Europe's requirements are that all testing is done at origin, South Africa is aligned with the European commission, meaning we only need a cross docking facility as clearing is immediate DAP term would be best suited Tax and duty for the consignee Cargo would be delivered on a fridge truck
USA	More research to be done
United Kingdom	Seafood from South Africa is duty free which is a cost advantage for South African exports, clearance is also aligned and no further testing is needed. DAP term would be suited and delivery to customers facility would be done by Savino
Islands – Mauritius, Maldives and Seychelles	More research to be done
Australia	In process of finding out

Booking process for customers

- Customer is to enter the via the Seairo Cargo Solutions website/portal. The customer must be registered with Seairo Cagro and if not yet, it takes the to a page that then requires them to apply for an account/registartion so the vetting can be done.

- This must include all info such as exporters code, company reg, vat number, commodity they export, trade lanes, so that when they click on submit, This initiates the link to be sent for the credit application via email. Email notification must be sent to customer at this stage

- Once customer is vetted and registered, the customer is issued an account number and the customer can start booking loads. Email notification to the customer at this stage

Now the customer can start to book loads

- Customer selects the routing they would like to send to by adding Port of Load and destination – API can be retrieved for these sailing dates using this website
- Search a schedule - MSC EN Shipping Schedules | MSC
    - Cape Town to UK – London Gateway
    - Cape Town to Israel - Ashdod
    - Cape Town to Dubai - Jebel Ali
    - Cape Town to Portugal - Lexioes
- exporter must select the amount of pallets they sending (minimum is 5 per exporter) this lights up a container showing them a visual of how full the container is.
- 1m x 1.2m x 1.8m (h) are the dimensions per pallet and they must confirm if the pallet that cargo is loaded on is fumigated with maximum 1 ton per pallet.
- 20 pallets fit into in a 40ft reefer
- 10 pallets fit into a 20ft reefer
- Customer must add their collection address in South Africa as well
- Exporter to select the commodity they sending (what type of seafood) this info can be pulled from the SARS website we call these tariff codes or HS codes
- Legal-LPrim-CE-Sch1P1Chpt1-to-99-Schedule-No-1-Part-1-Chapters-1-to-99.pdf

- At this stage Seairo needs to input the costs so the customer has a pallet calculator so the exporter can work out the costs
- The exporter must then add the
    - Shipper details

    - Consignee details
    - Delivery address
    - There is a dropbox for all the documents, invoice, NRCS, packing list that the customer must drop and drag info into
- Booking time frame – 1 week to book until the booking for that sailing closes.
- Once all customers have booked it shows them how full the container is
- Customers must book 3 weeks prior to vessel departure – 21 days prior to departure as this allows for
    - 1 week to book for the Container to fill up
    - 2 weeks for NRCS inspections to take place and ensure all customers meet the requirements for exporting in the container
    - All cargo will go to one cold store, as part of the NRCS protocols so it is inspected together.
    - Allows time to fix any mistakes so cargo can load together
    - Should the customer fail NRCS this would mean that they need to catch the next sailing and would be penalised for this based on the size of their order.

Once the exporter has added in all the shipment information, they need to go to submit booking, this take them to the waiver and terms and conditions, these are as follows

Above the waiver is a summary of the booking and info they have added and the waiver below must include the following.

- All the information provided is true and accurate
- Should the container not meet the require capacity this sailing will roll to the next available sailing
- Dimensions and weight adhere to the stipulated requirements for destination
- Should you book 5 pallets and cargo arrives on 6 pallets, only what has been booked will be sent and any additional cargo will move to the next sailing
- All documents supplied need to adhere to what is shipped
- Any rejections from NRCS will result in a penalty fee, should this hold up the SRS service and will also roll to the next vessel or returned to the cargo owner at a cost for the exporter
- NRCS inspections must be initiated by the exporter

Once the exporter accepts the terms and conditions it takes them to the check out button which then takes them to the payment link where they can select 60% deposit and 40% paid on delivery of the cargo

- Credit card payment
- Instant eft
- Secure pay

This would then generate an invoice which is emailed to the exporter with the link to pay, while at the same time it will notify Seairo cargo via email – email notification at this stage with a payment time frame of 1 week

Exporter then clicks submit booking, and it provides them with a booking reference number – This reference number will follow through and every update, as well as form part of their payment reference.

The booking would then integrate with Meatship.ai

Where by it creates a shipment and notifies Seairo and Savino that there is anew shipment and the reference number must carry through into this shipment and group them according to the sailing schedule and vessel

Savino (operations) then carry out the booking of the container and all supporting documents via meatship.ai

Once the documents are uploaded and generated in meatship, this feeds through back to Seairo Cargo so the customers have visibility of the shipping documents in their profile.

Tracking of the cargo can then be drawn from Metaship.ai website as well as temperature tracking and this can appear on the Seairo Cargo dashboard. Which would again feedback into the individual exporter profiles so they track their shipments

Important NOTES

- All customers loading in the container are responsible for their own NRCS inspections documentation – Cut off times will need to be met
- Email notification once cargo is collected from their premises and taken to the cold store must be sent to the customer so they can initiate the NRCS booking. As this done via email and downloaded document which the exporter pays for against ther own account.
- Seairo will liaise with NRCS and the cold store to ensure the bookings are made and timeous
- Once inspection have been done and the customer receives these, they need to be added to the customers booking profile by dragging and dropping these documents into the portal under their profile. Which must also be uploaded into Meatship.ai
- Loading of the container is planned for 1st day of the stack
- There will be NO loadings on a Friday due to the cut off times from NRCS
- Cargo is loaded from the designated country.
- As soon as the doors close, Seairo and Savino are to process the NRCS health certificate – The approved inspection documents are used to process the health certificates
- CARGO CANNOT BE LOADED ONTO THE VESSEL UNTIL THE HEALTH CERTIFICATE IS RECEIVED – SHOULD WE LOAD WITHOUT THE HC CARGO WILL BE REJECTED AT DESTINATION – AS THERE IS A TIME STAMP ON THE VESSEL MANIFEST
- Cargo then sails to destination
- There will be 1 MASTER Bill of Lading and various HOUSE bill of lading
- Each customer gets their own house bill, and the Savino as destination get the Master bill to clear cargo
- Savino at destination clears on the Savino Bills of lading for each customer
- There will be 1 master Bill and various house bills
- Savino process the destination landsides and delivers it to the nominated cold store on a DAP term
- Cold store unpacks it
- Consignee is to process tax and duty where applicable
- Once confirmation of clearance has taken place
- Savino will arrange delivery
- Only one week storage is added into the costing anything thereafter is for the customers account
- In countries that do not need further testing, cargo is to be taken to a cold store for cross docking and transferred into a fridge truck for delivery
-

Transporter collection process: In South Africa

- All refrigerated trucks can accommodate 30 pallets, a container can only take 20 pallets.
- Each pallets max weight is 1. tons equalling 20 tons total net weight of product
- Total payload is 25 tons per 30 pallet truck
- Therefore we need a trucking company that has port permits as we need to access cold stores potentially in the port.
- We would like to have a transporter that has a good tracking system that we can integrate with it for updates, and we would then book one truck with multiple collection points (max would be 5 collection)
- Every truck must have a TIVE device that we can access via the system using Metaship as they are integrated with TIVE already.
- Each pallet weighing about 1 ton and 1.8m heigh for Europe and UK standards
- Customers must provide their own fumigated pallets or we can supply them at an additional charge.
- At the last collection point the driver would add a seal to the truck and this seal number is what is provided to NRCS and the cold store
- A summary of each number of pallets will be recorded on the POD and each customer get their own POD
- Truck then proceeds to the nominated cold store in Cape Town
- One truck to load only fish
- This is to avoid any cross contamination as part of the health protocols set out by the authorities
- Transporter will then offload the truck at the cold store, Seairo would need a warehouse intake report of the cargo and a QC report done of the cargo received.
- Each load equates to one export load via sea, this load would be given a REF number and pallet numbers need to be taken as well to ensure all cargo for export is loaded correctly.
- Each pallet will be clearly labelled so to avoid any confusion at destination as to who's cargo is who's
- We could also use a QR code system that we could incorporate TIVE into as well, but we would need to ensure that each QR code has the exporters information loaded into it (this we can discuss further)

Cold store process

- Seairo Cargo need a certain amount of dedicated space at the cold store, to ensure no cargo is missed and that we have a more controlled area for the planning and loading the exports
- Cold store to send Seairo cargo the intake report, pallet numbers and QC report for each arrival.
- A pallet ID must be printed and added to the pallets loading in the container.
- Each pallet will have their own QR that get added to the pallet, so on delivery in destination country the cold store and customer only need to scan the QR code
- Each set of pallets get stored and on collection the buyer also has the QR code in order to receive the correct product.

- Seairo/ Savino to liaise with NRCS for the booking date and time to do the lab testing from the cold store this take 10 days to finalize
- PPECB booking to be made by Savino
- Seairo Cargo and Savino to communicate the arrival of the container with the cold store
- Cold store to stage cargo for export, pre Seairo/Savino inspection to be done to ensure all cargo is correct for loading
- All originals done with NRCS are electronic
- Seairo and Savino will receive a copy of each health certificate.

NRCS Process:

- Customer/Exporter of the cargo makes the NRCS booking at the accredited cold store
- NRCS set a date to be at the cold store and do lab/result testing
- This process takes 10 days
- Once cargo is at the cold store the NRCS needs to take samples from all the cargo on the same day
- Once the testing is concluded the customer receives a CoA approved document, and the cargo has been approved for export, the actual Health Certificate is done on the NRCS online platform which is linked to the European Commission which generates the HC, so their buyers at destination can also access this document. (future plan is to integrate via API with the NRCS system) meaning no further testing is needed to Europe and UK and cargo is cleared immediately with no further testing needed.
- Once cargo is then loaded into the container all the supporting documents are sent to NRCS to issue the health certificate for each customer

- These originals are also electronic and can be drop into the system for visibility
- The container cannot load onto the vessel if we do not have this HC, as they draw a manifest and if the HC is not issues before loading cargo is rejected.
- NRCS cut off daily is 12h00 for submissions
- Therefore no loadings on a Friday and only Mon to Thurs to allow time for any delays
- The originals will go to exporter but also to Savino and Seairo Cargo
- **Confidentiality between exporters is of the greatest importance.**

Cargo Packing Requirements for FISH:

- Cargo must be packed on fumigated pallets for EUR and UK (we can supply if needed)
- Cargo cannot be more than 1.2 ton per pallet
- Cargo must not be higher than 1.8m due to EUR transport standards

PPECB process:

- Once cargo has complete the NRCS lab testing, Seairo/Savino need to make the PPECB booking
- Q67 must be sent to PPECB, as well as the shipping line and cold store
- This must be done at the time of booking the reefer to ensure equipment
- As well as set the date with PPECB for inspection and follow up with them closer to the time of loading.

Documentation and booking process:

- At booking stage the following documents are loaded onto the portal and Seairo and Savino have visibility
    - Commercial Invoice
    - Packing list
    - Copy of import permit
    - Exporter details
    - Consignee details
    - Collection address details

- Once cargo is ready it is collected
    - POD per exporter is provided
    - Cold store intake are provided and QC

- NRCS booking confirmed by customer
    - CoA lab results are shared via the portal for visibility
    - Export certificate from NRCS
    - Seairo/Savino to ensure Health Certificate is done once cargo is loaded and shared via the platform per customer.

- PPECB booking
    - Q67 is sent and all parties confirm all is in order (PPECB, Shipping line, Cold store)

- Container is booked
    - Savino to ensure container is booked with shipping line
    - Vents closed
    - Temp at minus -18 degrees
    - Delivery address shared for delivery to the cold store

- Transporter collection from Cold Store
    - Genset required
    - Cargo taken to Port

- Documents
    - Master BOL is cut as Savino to Savino
    - House Bills can be cut for each customer
    - All supporting documents sent to the Savino at destination office to process the landsides and delivery

- Arrival at destination
    - Container is processed and delivered to cold store in destination
    - Savino to process the landsides and delivery .
    - Tax and duty to be paid by the consignee
    - Contact details of Savino at destination will be made with available for consignees to liaise with regarding collection.

Insurance

- Seairo/Savino to ensure we have insurance on the each load of ZAR 2.5 million per load
- This is crucial that we ensure we covered in all aspects

- TIVE devices will be used for monitoring of the cargo from start to finish which is part of the insurance requirements
- Should there be any variations with the TIVE devices, this alerts via email and on the system to monitor or action the necessary for a claim

Tracking and communication

- Customer will be able to track the container via the portal as well as having it linked to TIVE to monitor the temperature through the journey
- Access to this granted to the customer for visibility

Delivery at destination

- Cargo would be delivered to the nominated cold store
- An account will need to be opened with the cold store at destination by the Savino office
- A report of the cargo must be sent on arrival
- Landsides managed by Savino
- Tax and duty by consignee
- Once cargo is cleared a release is to be sent to Savino
- Savino to share with cold store and advise arrange the delivery for consignee's
- Cold store to advise once all cargo is collected.

Possible Challenges

Look at having a dedicated person handling this, as it could be time consuming

Making sure the correct pallets are delivered consignee

Finding the correct transporters at destination

Making sure truck arrives on time to avoid additional cold storage

Tax and duty payments are timeous by consignee to avoid delays in delivery

Ensuring when we invoice that no documents get mixed up, as confidentiality is of the greatest importance.

<u>Cost breakdown for the Pallet Calculator</u>

Description	Price per pallet in ZAR
SA Landsides	R 3,678.08
Ocean Freight – Cape Town to London Gateway	R 4 696,56
DAP charges - Destination charges	R 1 968,49
Agency Fee	R 500,00
Total Charges per 40ft Reefer to London Gateway	R 10,843.13 per pallet

Ideally we need to link to a exchange rate so that it can pull the ROE with a 20% fluctuation fee. This is based in ZAR but it will grow into USD as well.

BACK END

When customer/exporter registers – This must notify seairo cargo via email (or I can login to see who has been viewing or trying to register)

When customer/exporter has a credit application sent to them (this must start measuring the time it was sent) so we can measure how long it takes for them to send back, unless we create an online credit application for them?

Once customer makes a booking, this must notify both Seairo and the Exporter of the booking made with their reference number

Email of the invoice and tracking of the payment – with payment link

A count down email reminder to when the booking closes OR a reminder the day before the booking closes

Email to confirm payment has ben received or NOT yet received with anticipated collection dates to add pressure to the slow payers.

Email to the customer/exporter of collection date by truck from their premises

Email to exporter to initiate the NRCS inspection

Email to customer after inspection for a reminder to send CoA lab testing results (4 days after inspection has taken place)

Email to exporter customer that container is booked with container number

Email to exporter once cargo has been loaded

Email to exporter that cargo is loaded

Email to exporter that cargo has arrived at destination

Email to exporter that cargo has been cleared at destination

Email to exporter that cargo has arrived at destination Cold store

Email final invoice for balance of payment remaining

All this can also be part of the dash board on the Seairo Cargo platform but can we backed up by email, this will depend on the customer and if they want the information being pushed to them, or if they happy to pull the information (Customers can vary)

WHAT SEAIRO can see behind the scenes

- Who has registered and all company info per profile in order to vet them
- Credit application submitted
- Account numbers
- All consignee information
- What has been booked to monitor the filling up of the containers
- Back end access to add and update rates and trade lanes
- Back end to see who has paid and who hasn't – Tracking of the invoices
- See which exporters added all the documents – Highlight what is still missing as well as highlight which documents Seairo and Savino need to add
- Rules to be put in place about the documents that must be added
    - Commercial invoice - Exporter
    - Packing list - Exporter
    - Lab testing – exporter
    - Import permits – exporter
    - House Bill of lading – Seairo/Savino
    - SAD500 Seairo/Savino
    - Q67 – Seairo/Savino
    - Health certificate – Seairo/Savino
    - Certficate of origin – Seairo/Savino

- See all activity behind the scene
- Temp tracking and downloads from the temp tracking devices
- Amount of pallets per customer sent monthly/quarterly/ annually
- Drawn down on shipping costs
- Most popular trade lanes

Please add all your comments, thoughts and views for continuous updates and amendments
