

Creating a road freight consolidations link on Seairo

On the dashboard have 2 x tabs

- New Sea Freight Booking
- New Road Freight booking

Once they click on the road freight booking it takes them to the next page which would almost have its own booking platform – See on the next picture

Here it would NOT say Shared Reefer or Shared container. Instead, it would say

Refrigerated Road Freight booking

Below would say

- **Collection address** - which would need to link to google maps, or garmin or some sort of sight that allows them to pin point the collection address.
Almost like we would when sending an address to someone on google maps, but at the top they must select the basis of the routing first, which ties into their rates, and then add the actual address
 - o **CPT to JNB**
 - o **JNB to CPT**
 - o **JNB to DBN**
 - o **CPT to DBN**
- **Delivery address** – Same would apply here, they need to add delivery address, with the option of adding an additional delivery point at this stage.
- **Product** – This would remain the same, as we would assign a commodity to the trucks in admin
- **Temperature** – This may be a level of complexity as on a truck you can mix temperatures, meaning the drop down bar must state the following for trucking
 - o -20 to -18 - frozen
 - o 0 degrees to 5 degrees – Partly frozen
 - o 5 degrees to 7 degrees – Chilled
 - o 10 degrees to 18 degrees – Ambient
- **Sailing**- Instead of vessel this would be need to say – **Select you truck**

The screenshot shows a 'New Shipment Booking' form with a close button (X) in the top right corner. The form is divided into three main sections: 'ROUTE DETAILS', 'CARGO REQUIREMENTS', and 'SAILING'. The 'ROUTE DETAILS' section includes 'Origin Port' and 'Destination Port' dropdown menus. The 'CARGO REQUIREMENTS' section includes 'Product' and 'Temperature' dropdown menus. The 'SAILING' section includes a 'Select a vessel' dropdown menu. The form is currently in a wizard state, with the first step being 'ROUTE DETAILS'.

New Shipment Booking Complete the 3-step wizard to secure your freight space. X

Shared Reefer Services **Shared Container Service**

Pick a product first

- Once they get to this page – There are a few additions
 - The truck must be able to take 28 pallet space and can start from 1 pallet
 - The Nett Weight can stay the same
 - Dimensions of the pallet must be added
 - But below the dimensions there must be a drop down bar for overhang pallets
- **YES or NO**

New Shipment Booking

Complete the 3-step wizard to secure your freight space.

With regards to pricing – When we add rates into admin, if the customer selects over hang above there must be an additional fee that pulls through on the costing sheet for this.

PO number for the customer can stay the same.

Cost will be 3 lines

- Transport cost per pallet
- Additional drop fee
- Over hang fee

**New Shipment Booking**
Complete the 3-step wizard to secure your freight space.

Cost Breakdown		ZAR
Origin Landsides Collection, handling, port charges		R 3 014,04
Ocean Freight Shipping line, BAF, surcharges		R 4 452,00
Destination Charges Delivery, customs, terminal handling		R 2 384,43
Cost per pallet ×1		R 9 850,47
Total ×5		R 49 252,35

PAYMENT SCHEDULE

☒ **60% DEPOSIT**
R 29 551,41

☐ **40% BALANCE**
R 19 700,94

At this stage of the booking process – we could remove the consignee details as this will not be relevant to road freight – this would have been added to the booking stage 1 above, which would give us the collection and delivery address.

So the only document that needs to be uploaded for transport purposes would be a packing list so we can verify the dimensions of the pallets and then a tab for POD (which will be uploaded after the load) Proof of delivery from the transporter.

Terms and conditions will change but must still be there, as well as adding a copy of Goods in Transit insurance that the customer can view at any time.

Then they go on to finalize their booking

Consignee & Documents

Enter the consignee and upload each required document.

Consignee Name *

e.g. Global Foods Ltd

Consignee Address

Delivery Location

Collection / Loading Address *

1/5

Where we collect your cargo. Add up to 5 pickup points.

1

Label (optional)

Full address - e.g. 12 Main Rd, Cape Town

+ Add another collection address

Required Documents

CONFECTIONARY

0/5 uploaded

Commercial Invoice

Required by customs - declares value + parties

Upload

A few important notes

- Once the booking is finalized in admin and shows as confirmed, the customers need to pay 60% upfront
- Rates will need to be loaded per customer as customers may have different rate structures based on the volume that they send.
- Can we add a messaging system that send messages to the customers on whats app and email updates of the progress of the truck and its whereabouts?
- If we have tracking from the trucking company can that also pull through

The idea of this is almost like a separate page to the sea freight but will over time collaborate the two, as some customers use both services.

Local consolidations and international consolidations, which ideally I want to capitalize on both

ADMIN additions

Once the customer vetted and loaded on the system – Can we add their rates under their profile so it pulls through when they book - per customer

Commodities would be added to the truck loading – Just like we do for the containers

Can we make a space to add a file number in admin against that truck, so that for example if the load says SRS234 and there are 5 customers loading in truck SRS234 then its easy to group them together on the finance side

Can Seairo integrate with Xero the accounting platform?
