

Amendments to the Road Freight portal

When selecting the product it can be any product type, when loading trucks there are no limitations on the mixing of cargo, trucks also have dual temp units so frozen and chilled can be loaded together. So the drop down bar for the products can be – ALL the products such as – We don't need to split this.

Frozen Poultry

Frozen Meat

Frozen Seafood

Fruit

Dairy, etc etc

When selecting temps, all 3 temps can drop down at once for them to select

Frozen – minus -18

Chilled – 5 – 7 degrees

Ambient – 15 – 18 degrees

The screenshot shows a web form titled "Refrigerated Road Freight Booking" with a subtitle "Book pallet space on a refrigerated truck - from 1 pallet." and a close button (X). The form is divided into four steps: 1. ROUTE & ADDRESSES, 2. CARGO & TRUCK (currently active), 3. DOCUMENTS, and 4. REVIEW & CONFIRM.

Under the "CARGO & TRUCK" step, there are several input fields:

- Product:** A dropdown menu with "FROZEN SQUID" selected.
- Temperature:** A dropdown menu with "Select temperature" selected.
- Select your truck:** A section with the instruction "Pick a product + temperature to see available trucks."
- Pallet Count:** A text input field with "e.g. 4" entered.
- Nett Weight (kg):** A text input field with "Total nett weight" entered.

Below these fields, a note states: "From 1 pallet - the truck takes 28 pallet spaces."

The form also includes a section for **PALLET DIMENSIONS (CM)** with three input fields: **LENGTH** (cm), **WIDTH** (cm), and **HEIGHT** (cm).

At the bottom, there is a question **Do any pallets overhang?** with two radio button options: **No overhang** and **Yes - pallets overhang**.

When selecting the truck type – Can you please add a visual of how many pallets are in the truck – Like we have for sea freight

trucks take 28 pallets spaces in total (they can take 30, but I always leave two open in case of bad packing)

Refrigerated Road Freight Booking

Book pallet space on a refrigerated truck - from 1 pallet.

Do any pallets overhang?

No overhang

Yes - pallets overhang

 Back

Continue 

So the booking of the pallets in the truck look like this – And they can pick the number of pallets and see how the truck is filling up (like they do on sea freight)

New Shipment Booking

Complete the 3-step wizard to secure your freight space.

I noticed that I was not able to upload the Packing list – I was wondering if that function was maybe not activated in order to upload at this stage

Tracking – Are we able to integrate with the trucks tracking system to see where they are, and what info do you need for this?

IMPORTANT

From a bookings and access point of view. Am I able to grant two other people access to see the bookings ONLY for ROAD freight from an admin point of view, and limited access to what features they able to update.

Management

- Amend rates per customer
- Add packing list
- Confirm the loads
- Access Invoices
- Amend and add additional loads
- Access to whats app functionality
- Invoicing only for road freight
- Upload PODS
- Basically full access only to road freight

Operations

- Only able to confirm loads on the bookings dashboard/icon
- Able to whats app customers from the portal
- Upload PODS
- NO ACCESS to see rates, INVOICING or amend anything on the system

ADMIN BACK END

- Can I load the road freight rates per customer whereby we add additional rates lines, for
 - o Routings
 - o Number of pallets – See example below
 - o Which pulls through for them once the account is loaded against their profile

[illegible]

As well as the option per customer on payment terms. Meaning some customers will have 30 days payment terms from statement, some will have 60/40 split on booking and others will have 7 days from delivery.

When I vet and approve the customer, when loading them onto Seairo for access to book. I need to be able to select their payment terms so this come up on their pricing, and pulls through to invoicing.

Should I want to load already existing customers, can I also provide them with a password and can they change this to their own password at a later stage?

When looking at the dashboard can we also split it, like you have done here between Sea and Road – So to not confuse the bookings, also if we give access to operations then they will need to only see ROAD

See screen shot of the fleet below

There is no category needed for when assigning a truck because we can mix all products together in a truck – so lets either take the category out from when creating the truck OR add an option saying – ALL foods types

This should allow for all 3 temps ranges to be made available when assigning the truck

1. ROAD ROUTE

Cape Town → Johannesburg

2. TRANSPORTER

TRANSPORTER / TRUCK NAME
